Profile

Principal-level Product Leader with 10+ years of experience building AI-native platforms, developer ecosystems, and enterprise SaaS products. Deeply technical, with a strong bias toward systems thinking, API design, and applied AI. Proven ability to translate emerging technologies (LLMs, agent frameworks, MCP, vector search) into scalable, revenue-generating products. Track record of operating effectively across architecture, execution, and executive strategy in high-growth environments.

- **Launched AI Developer Tooling Kit** at Recurly, gaining internal and stakeholder adoption of Model Context Protocol toolkit, enabling AI-powered onboarding and administration of a leading payments platform.
- **Scaled Recharge's platform from \$10M to \$150M ARR** by leading AI and API product strategy and execution, shaping enterprise adoption across 20+ PMs and 500+ employees.
- **Launched an AI-powered subscription Concierge** that cut churn, boosted AOV, and deepened brand trust through conversational automation using LLMs.
- **Transformed developer enablement and platform extensibility** with high-impact REST/RPC APIs and JavaScript SDKs, accelerating enterprise enablement and partner integrations.

Professional Experience

Recurly

Lead **Compass**, Recurly's AI division, owning the vision, architecture, and driving execution of AI-powered subscription management tools.

Principal Product Manager – AI (May 2025 - Present)

- Spearheaded the launch of Recurly's merchant-facing AI assistant, leveraging Google Agent Developer Kit to enable conversational access to documentation, API help, and account-specific insights via an embedded chat interface.
- Designed and shipped Recurly Admin Model Context Protocol (MCP): a secure, authenticated layer that enables AI agents to safely call Recurly's APIs, forming the foundation for future AI automation across the platform.
- Defined the short, mid, and long-term AI product roadmap, introducing features like dynamic dunning recommendations, CFO-ready analytics digests, and anomaly-based action triggers.
- Built and evangelized Recurly's AI evaluation and governance pipeline, enabling internal teams to safely test AI features in production-like environments before customer rollout.
- Collaborated cross-functionally with design, engineering, support, and GTM teams to scale AI products from prototype to GA across Recurly's enterprise customer base.
- Delivered executive presentations and strategy documents driving buy-in for AI investment, while aligning the roadmap with regulatory, compliance, and financial constraints unique to the subscription billing space.

Recharge Payments

Senior Product leader during hypergrowth from 80 to 500+ employees, leading cross-functional teams to launch enterprise APIs, AI-powered tools, and no-code automation tools from concept through general availability.

Principal Product Manager (June 2022 - May 2025)

- Led the development and launch of an agentic, AI-powered Subscription "Concierge", leveraging LLMs to support subscription management through conversational interfaces (email, SMS, and chat). Designed and optimized AI-driven interactions to enhance subscriber engagement, expand self-service capabilities, and streamline subscription management. Enabled proactive, intelligent responses that reduced churn, increased Average Order Value, and reinforced brand trust in an increasingly competitive market.
- Drove the strategic vision, architecture, and delivery of enterprise-grade APIs, no-code workflow tools, and AI-driven products supporting \$150M Annual Recurring Revenue and 500+ employees. Serve a 20-person product team as a technical leader and platform SME in expanding the product ecosystem, scaling from \$10M ARR at inception.
- Conceived and launched a configurable workflow-builder UI enabling CPG brands and DtC merchants to design, automate and A/B test complex subscription flows (e.g., product progressions, multi-step subscription kits, starter kit "unpacking") without custom code. Increased merchant agility and reduced time-to-market for new

subscription offerings. Increased average customer value by 66% while significantly decreasing TCO of Recharge.

Senior Product Manager (July 2021 - June 2022)

- Architected and delivered scalable REST/RPC APIs, JavaScript and React SDKs, unlocking enterprise-level features including configurable API rate limits. Redefined architecture of solution to complete a critical 6-month engineering project in just 2 days of development, accelerating enterprise deal closures and contributing significantly to ARR growth.
- Presented at annual merchant conferences, aligning product strategy with C-suite vision and industry trends. Conducted technical training and product evangelism sessions for both internal teams and high-tier enterprise clients, translating complex architectures into clear, strategic value.

Product Manager (December 2019 - July 2021)

- Led cross-functional initiatives to implement robust API versioning, defining schemas for 20+ resources and enabling seamless feature enhancements without breaking changes. Extended platform reach through integrations with Shopify, Magento, BigCommerce, and custom commerce solutions, driving multi-channel adoption and enterprise expansion.

Sovos Compliance

Product Manager (November 2017 - December 2019)

- Owned product roadmap and backlog for global tax compliance SaaS solutions serving global enterprise clients. Oversaw integration of tax determination and reporting APIs with leading ERP and eCommerce platforms
- Established value matrices, leveraged at the executive level, to score integration and market opportunities considering market factors and development complexity.

Product Associate (April 2017 - November 2017)

- Developed requirements and user stories for tax compliance applications and APIs in Python, PHP, and Java environments, optimizing performance and usability for integrations with Oracle EBS, SAP Cloud ERP, Netsuite, Magento, and more.
- Balanced strategic priorities, tech-debt reduction, and customer-critical enhancements to consistently deliver on quarterly/annual product milestones for leading SMB sales tax management platform.

Program Coordinator (January 2016 - April 2017)

- Managed and executed the development backlog for a SCRUM team overseeing zero-to-one products in the SMB tax and beverage alcohol compliance space

Sidebench Studios

Business Analyst (August 2015 - January 2016)

- Translated user and client feedback into actionable engineering specs for iOS apps in medical insurance, warehouse management, and new media.

Apple Inc.

Technical Specialist (May 2014 - April 2015)

- Leveraged Apple best practices to provide technical training, support and repair service to a broad audience while maintaining a personal NPS score of 90%+.

Campus Representative (January 2013 - December 2013)

- Provided educational materials and presentations through the rollout of 1-iPad-per-student program for 2,000 students and faculty

Core Capabilities

AI Systems & Platform Architecture

- LLM-based product design for chatbots, assistants, and agentic workflows
- Agent orchestration, tool calling, and safety-aware execution
- Vector search, embeddings, and retrieval-augmented systems
- Model evaluation, prompt iteration, and governance frameworks

Product Strategy & Business Impact

- Executive-level product strategy, vision, and multi-year roadmapping
- Revenue growth and platform scale (ARR growth from ~\$15M to ~\$130M+)
- KPI definition, experimentation, and data-informed decision-making

Technical Product Leadership

- Designing and scaling enterprise SaaS platforms, APIs, and SDK ecosystems
- Payments, subscriptions, and compliance-driven product systems
- Translating architectural constraints into product strategy

Leadership, Influence & Communication

- Cross-functional leadership across engineering, design, GTM, and executives
- Distributed team collaboration and remote-first execution

- Technical storytelling, executive communication, and public speaking

Technical Toolkit

AI & ML

- LLM-powered chat systems and assistants
- Agentic architectures and orchestration layers
- Model Context Protocol (MCP)
- Vector databases and embedding pipelines
- Prompt design, evaluation, and governance tooling

Engineering & Platforms

- REST & RPC API design
- JavaScript / TypeScript SDKs
- Relational databases and data modeling
- SaaS platform and integration architecture
- Payments, subscriptions, and compliance systems

Tools & Infrastructure

- Cursor, Claude Code, OpenAI, Google Agent Developer Kit
- SQL, BigQuery, BI tooling
- GitHub, Vercel, Render, Supabase

Personal Endeavors

Aisl

AI-powered meal planning and grocery intelligence platform.

- Designing LLM-driven planning workflows, structured data extraction, and cost-aware AI pipelines
- Focus on real-world AI utility, data quality, and sustainable inference cost

Krengl

Shared wish-list and gift coordination platform (Web + iOS).

- Built with [Next.js](#), Typescript, Supabase, and real-time eventing.
- Implemented complex domain logic around visibility, reservations, and notifications
- Emphasis on clean architecture, scalable and secure data models (with RLS), and UX clarity

CmdrGPT

AI-powered domain assistant for Magic: The Gathering rules and card intelligence.

- Built a retrieval-augmented generation (RAG) system with continuous data ingestion, embedding pipelines, and vector search over structured and unstructured MTG data.
- Implemented agent orchestration integrating tool calling, external APIs, and a production web interface to deliver low-latency, cost-aware AI responses.

Education & Certifications

B.S. Mechanical Engineering - Kansas State University

Advanced AI Product Management Certification (2025)

Certified SCRUM Master (2018)
